

Date and Time Function

Function	What does it do?	Python Code	Example Output
<code>pd.to_datetime()</code>	Converts a string into DateTime format	<code>df["Date"]=pd.to_datetime(df["Date"])</code>	2025-07-15 10:30:45
<code>.dt.year</code>	Extracts the year	<code>df["Date"].dt.year</code>	2025
<code>.dt.month</code>	Extracts the month number	<code>df["Date"].dt.month</code>	7
<code>.dt.day</code>	Extracts the day of the month	<code>df["Date"].dt.day</code>	15
<code>.dt.hour</code>	Extracts the hour	<code>df["Date"].dt.hour</code>	10
<code>.dt.minute</code>	Extracts the minute	<code>df["Date"].dt.minute</code>	30
<code>.dt.second</code>	Extracts the second	<code>df["Date"].dt.second</code>	45
<code>.dt.day_name()</code>	Returns the weekday name	<code>df["Date"].dt.day_name()</code>	Tuesday
<code>.dt.month_name()</code>	Returns the month name	<code>df["Date"].dt.month_name()</code>	July
<code>.dt.dayofweek</code>	Returns weekday number (Mon=0)	<code>df["Date"].dt.dayofweek</code>	1
<code>.dt.dayofyear</code>	Returns day number in the year	<code>df["Date"].dt.dayofyear</code>	196
<code>.dt.quarter</code>	Returns quarter (1–4)	<code>df["Date"].dt.quarter</code>	3
<code>.dt.strftime()</code>	Formats the date	<code>df["Date"].dt.strftime("%d-%m-%Y")</code>	15-07-2025
<code>.dt.date</code>	Returns only the date part	<code>df["Date"].dt.date</code>	2025-07-15

Function	What does it do?	Python Code	Example Output
<code>.dt.time</code>	Returns only the time part	<code>df["Date"].dt.time</code>	10:30:45
<code>.dt.weekday</code>	Returns weekday number	<code>df["Date"].dt.weekday</code>	1
<code>.dt.is_month_start</code>	Checks if it is the first day of the month	<code>df["Date"].dt.is_month_start</code>	False
<code>.dt.is_month_end</code>	Checks if it is the last day of the month	<code>df["Date"].dt.is_month_end</code>	True
<code>.dt.is_leap_year</code>	Checks if the year is a leap year	<code>df["Date"].dt.is_leap_year</code>	False
<code>.dt.days_in_month</code>	Returns the number of days in the month	<code>df["Date"].dt.days_in_month</code>	31
<code>pd.Timestamp.now()</code>	Returns the current date and time	<code>pd.Timestamp.now()</code>	2026-07-02 14:35:10
<code>pd.Timestamp.today()</code>	Returns today's date and time	<code>pd.Timestamp.today()</code>	2026-07-02 14:35:10
<code>pd.Timedelta(days=5)</code>	Creates a time duration	<code>pd.Timedelta(days=5)</code>	5 days 00:00:00
<code>+ pd.Timedelta()</code>	Adds days to a date	<code>date + pd.Timedelta(days=10)</code>	2025-07-25
<code>- pd.Timedelta()</code>	Subtracts days from a date	<code>date - pd.Timedelta(days=7)</code>	2025-07-08
<code>date1 - date2</code>	Calculates the difference between two dates <code>d2 - d1</code>		14 days 00:00:00
